

ENVIRONMENT PROTECTION POLICY

Protection of the environment is integrated in every process in our Company, based on the Requirements of the Standard **ISO 14001:2004**.

Fundamental principles of Environment at FENI INDUSTRIES are:

- To identify, assess and decrease any impacts and risks to the environment potentially generated from our activities;
- To continually improve our Environment (air, water, soil);
- To comply with all National and European laws and regulations on environmental protection.

In order to comply our fundamental principles, we engage ourselves to:

- Identify all aspects of environment, to control and monitor all significant aspects;
- Define and implement internal rules which are not proposed within the actual legislations, but are determined in order to improve the system for management of environmental protection;
- Develop environmental awareness through communication and training of our Employees as preventive action and continuous improvement for protection of the environment;
- Save Resources and Energy, according to Sustainable Development principles;
- Overview opinions and suggestions of all interested parties and perform adequate measures regarding the improvements of environment protection.

Scope: Excavation of nickel ore and production of ferronickel.
